EUROPEAN AND MEDITERRANEAN PLANT PROTECTION ORGANIZATION ORGANISATION EUROPEENNE ET MEDITERRANEENNE POUR LA PROTECTION DES PLANTES

(11-17239)

Summary sheet of validation data for a diagnostic test

The EPPO Standard PM 7/98 *Specific requirements for laboratories preparing accreditation for a plant pest diagnostic activity* describes how validation should be conducted. It also includes definitions of performance criteria.

	T		
Target Organism	Bursaphelenchus xylophilus		
Short description	Identification of Bursaphelenchus xylophilus by specifc PCR Castagnone et al. 2005		
Laboratory contact details	Anses, Laboratoire de la Santé des Végétaux - Unité de Nématologie Domaine de la Motte au Viconte BP 35327, 35653 Le Rheu, France		
Date and reference of the validation report	2011-05 - Evaluation d'outils moléculaires d'identification de Bursaphelenchus xylophilus sur individus isolés		
Validation process according to EPPO Standard PM 7/98:	Yes		
Reference of the test description	O Appendix 2 Castagnone C., Abad P & Castagnone-Serneno P (2005) Satellite DNA-based species specific identification of single individuals of the pinewwood nematode Bursaphelenchus xylophilus EJPP 112, 191-193		
Is the test the same as described in the EPPO DP?	Yes		
Is the lab accredited for this test?	No		
Plant species tested (if relevant)			
Matrices tested (if relevant)	Nematodes		
List of methods used			
Method for extraction / isolation / baiting of target organism from matrix			
Molecular methods, e.g. hybridization, PCR and real time PCR	Х	satellite DNA species specific PCR	
Serological methods: IF, ELISA,			

Direct Tissue Blot Immuno Assay					
Plating methods: selective isolation					
Bioassay methods: selective enrichment in host plants, baiting, plant test and grafting.					
Pathogenicity test					
Fingerprint methods: protein profiling, fatty acid profiling & DNA profiling					
Morphological and morphometrical methods intended for identification					
Biochemical methods: e.g. enzyme electrophoresis, protein profiling					
Other					
Analytical sensitivity (= limit of detection)					
What is smallest amount of target that can be detected reliably?	2-5 nematods				
<u>Diagnostic sensitivity</u>					
Proportion of infected/infested samples tested positive compared to results from the standard test, see appendix 2 of PM 7/98	Not performed				
Specify the standard test	Not relevant				
Analytical specificity					
Specificity value	100%				
Number of strains/populations of target organisms tested	7 populations (see table1)				
Number of non-target organisms tested	15 populations (see table1)				
Cross reacts with (specify the species)	none				
Diagnostic Specificity	Diagnostic Specificity				
Proportion of uninfected/uninfested samples (true negatives) testing negative compared to results from a standard test	Not performed				
Specify the standard test	Not relevant				
Reproducibility					
Provide the calculated % of	95.8% for 2 nematodes				

agreement for a given level of the pest (see PM 7/98)	100% for 5 nematodes		
Repeatability			
Provide the calculated % of agreement for a given level of the pest (see PM 7/98)	100%		
Test performance study			
Test performance study?	No		
Include brief details of the test performance study and its output.It available, provide a link to published article/report			
Other information			
Any other information considered useful e.g. robustness, ease of performing the test, etc.	See table 2. The full report is available upon request to the laboratory.		
The following complementary files are available online:	 Table 1 List of species and population tested to evaluate specificity table 2 comparison of tests
