Summary sheet of validation data for a diagnostic test

The EPPO Standard PM 7/98 *Specific requirements for laboratories preparing accreditation for a plant pest diagnostic activity* describes how validation should be conducted. It also includes definitions of performance criteria.

Performance Criteria :	
Organism 1.:	Orthotospovirus chrysanthinecrocaulis(CSNV00)
<u>Analytical sensitivity</u>	
What is smallest amount of target that can be detected reliably?	Dilutions of CSNV RNA in RNA of chrysanthemum. Dilutions of CSNV, INSV and TSWV RNAs in water. LOD: For the dilutions in RNA of chrysanthemum: CSNV: 10 ⁰ For the dilutions in water: CSNV: 10 ⁻¹ INSV: 10 ⁻³ TSWV: 10 ⁻⁴
<u>Analytical specificity - inclusivity</u>	
Number of strains/populations of target organisms tested	No of targets tested: 27 (tospoviruses of American clade 1).

Specificity value	100%
Analytical specificity - exclusivity	
Number of non-target organisms tested	No of non-targets tested: 6 (5 isolates of other tospoviruses and one CSVd).
Specificity value	83% (one false positive result; sequencing of amplicon confirmed that this was nonspecific amplification of the host (N. benthamiana) tissue)
Reproducibility	
Provide the calculated % of agreement for a given level of the pest (see PM 7/98)	No. of target isolates tested: 4 (for two isolates, two dilutions were evaluated) No. of different days: 3 Percentage of identical results (positive replicates): 100%
Organism 2.:	Orthotospovirus(1TOSPG)
Test performance study	
Test performance study?	no
