Performance Criteria :	
Organism 1.:	**Potyvirus plumpoxi(PPV000)**
Analytical sensitivity	
What is smallest amount of target that can be detected reliably?	PPV-infected Nicotiana benthamiana extracts could be diluted up to at least 10x times in PPV free Prunus sp. extract and still show a positive signal
Diagnostic sensitivity	
Proportion of infected/infested samples tested positive compared to results from the standard test, see appendix 2 of PM 7/98	45%
Standard test(s)	Known status of of samples. Positive samples with

	known Ct values were diluted in PPV free Prunus extract.
Analytical specificity - inclusivity	
Number of strains/populations of target organisms tested	PPV strain An, C, CR, D, EA, M, Rec, T
Specificity value	100%
Analytical specificity - exclusivity	
Number of non-target organisms tested	NA
Specificity value	NA
Diagnostic Specificity	
Proportion of uninfected/uninfested samples (true negatives) testing negative compared to results from a standard test	98.3%
Specify the test(s)	Known status of of samples. All specimens were sequenced using NGS to verify viral content (PPV and other viruses)
Reproducibility	
Provide the calculated % of agreement for a given level of the pest (see PM 7/98)	71.67%
Repeatability	
Provide the calculated % of agreement for a given level of the pest (see PM 7/98)	33.33% evaluated with 2 replicate samples
