

**EUROPEAN AND MEDITERRANEAN PLANT PROTECTION ORGANIZATION**  
**ORGANISATION EUROPEENNE ET MEDITERRANEENNE POUR LA PROTECTION DES PLANTES**  
**Summary sheet of validation data for a diagnostic test**

The EPPO Standard PM 7/98 *Specific requirements for laboratories preparing accreditation for a plant pest diagnostic activity* describes how validation should be conducted. It also includes definitions of performance criteria.

<b>Laboratory contact details</b>	Netherlands Institute for Vectors, Invasive plants and Plant health P.O. Box 9102, 6700 HC Wageningen, Netherlands
<b>Short description of the test</b>	Detection of rose rosette virus by real-time RT-PCR in Rosa spp. leaves
<b>Date, reference of the validation report</b>	2023-08-21 - Comparison and validation of real-time RT-PCRs for the detection of rose rosette virus in Rosa spp.
<b>Validation process according to EPPO Standard PM7/98?</b>	yes
<b>Is the lab accredited for this test?</b>	no
<b>Was the validated data generated in the framework of a project?</b>	EURL
<b>If yes, please specify</b>	EURL-Virology (European Union Reference Laboratory for pest of plants on viruses, viroids and phytoplasmas)
<b>Description of the test</b>	
<b>Organism(s)</b>	Emaravirus rosae (RRV000)
<b>Detection / identification</b>	detection
<b>Method(s)</b>	Extraction Molecular real time RT PCR
<b>Method: Extraction</b>	
<b>Reference of the test description</b>	
<b>As or adapted from an EPPO diagnostic protocol</b>	no
<b>New test being considered for inclusion in the next version of the EPPO diagnostic protocol?</b>	yes
<b>As or adapted from an IPPC diagnostic protocol</b>	no
<b>Reference of the test</b>	RNeasy plant mini kit (QIAGEN)
<b>Is the test modified compared to the reference test</b>	yes The equivalent of one gr fresh leaf tissue was ground in 3.5 ml GH+ buffer (6 M guanidine hydrochloride, 0.2 M sodium acetate pH 5.2, 25 mM EDTA, and 2.5% PVP-10). One ml homogenate was incubated in a thermoshaker (850 rpm, 65°C for 10 min). After centrifugation (16,000 x g, 2 min), 500

	<p>µl supernatant was loaded on the QIAshredder spin column and centrifuges (16,000 x g, 2 min). Thereafter the manufacturer's instructions were followed. RNA was eluted from the spin column with 40 µl RNase-free water</p>
<b>Other information</b>	
<b>Method: Molecular real time RT PCR</b>	
<b>Reference of the test description</b>	
<b>As or adapted from an EPPO diagnostic protocol</b>	no
<b>New test being considered for inclusion in the next version of the EPPO diagnostic protocol?</b>	yes
<b>As or adapted from an IPPC diagnostic protocol</b>	no
<b>Reference of the test</b>	<p>Test A: Vazquez-Iglesias I, Scrace J, McGreig S, Pufal H, Robinson R, Clover GRG, Adams IP, Boonham N, Fox A, (2020). First report of Rose spring dwarf-associated virus in Rosa spp. in United Kingdom. New Disease Reports 42: 13. Test B (primers/probe set 2-1), Test C (primers/probe set 2-2, Test D (primers/probe set 3-2), Test E (primers/probe set 3-5): Babu B, Jeyaprakash A, Jones D, Schubert TS, Baker C, Washburn BK, Miller SH, Poduch K, Knox GW, Ochoa-Corona FM, Paret ML (2016). Development of a rapid, sensitive TaqMan real-time RT-PCR assay for the detection of rose rosette virus using multiple gene targets. Journal of Virological Methods 235: 41-50. Test F: Dobhal S, Olson JD, Arif M, Garcia Suarez JA, Ochoa-Corona FM (2016). A simplified strategy for sensitive detection of rose rosette virus compatible with three RT-PCR chemistries. Journal of Virological Methods 232: 47-56. Test G: Vazquez-Iglesias I, Ochoa-Corona FM, Tang J, Robinson R, Clover GRG, Fox A, Boonham N (2020). Facing Rose rosette virus: A risk to European rose cultivation. Plant Pathology 69: 1603-1617</p>
<b>Is the test modified compared to the reference test</b>	yes Real-time PCR kit and primer/probe concentrations
<b>Kit</b>	
<b>Is a kit used</b>	yes
<b>Manufacturer name</b>	Applied Biosystems
<b>Specify the kit used</b>	TaqMan RNA-to-CT 1-Step Kit
Kit used following the manufacturer's instructions?	yes
<b>Other information</b>	
<b>Performance Criteria :</b>	
<b>Organism 1.:</b>	<b>Emaravirus rosae(RRV000)</b>
<b>Analytical sensitivity</b>	

<b>What is smallest amount of target that can be detected reliably?</b>	Maximum dilution in healthy Rosa Test A: Not tested (reason: false negative for OK-1 isolate) Test B: Not tested (reason: false negative for OK-1 isolate) Test C: 10 <sup>-4</sup> (MD, 'Knock out'), 10 <sup>-3</sup> (OK-1) Test D: 10 <sup>-4</sup> (MD, 'Knock out'), 10 <sup>-2</sup> (OK-1) Test E: 10 <sup>-4</sup> ('Knock out'), 10 <sup>-3</sup> (MD, OK-1) Test F: 10 <sup>-3</sup> (MD, 'Knock out', OK-1) Test G: Not tested (reason: very low fluorescence plateau for gBlock2)
<b>Diagnostic sensitivity</b>	
<b>Proportion of infected/infested samples tested positive compared to results from the standard test, see appendix 2 of PM 7/98</b>	67% (tests A and B (OK-1 isolate not detected)), 100% (Tests C, D, E, F and G)
<b>Standard test(s)</b>	High-throughput sequencing
<b>Analytical specificity - inclusivity</b>	
<b>Number of strains/populations of target organisms tested</b>	MD, Ok-1, 'Knock out', gBlock1, gBlock2, gBlock3, gBlock4
<b>Specificity value</b>	57% (test A) 71% (tests A and B), 100% (Tests C, D, E, F and G)
<b>Analytical specificity - exclusivity</b>	
<b>Number of non-target organisms tested</b>	Prunus necrotic ringspot virus (PNRSV0)
<b>Specificity value</b>	100% (Tests C, D, E and F), Not tested for test A, B and G
<b>Diagnostic Specificity</b>	
<b>Proportion of uninfected/uninfested samples (true negatives) testing negative compared to results from a standard test</b>	67% (tests A and B (OK-1 isolate not detected)), 100% (Tests C, D, E, F and G)
<b>Specify the test(s)</b>	High-throughput sequencing
<b>Reproducibility</b>	
<b>Provide the calculated % of agreement for a given level of the pest (see PM 7/98)</b>	Not tested
<b>Repeatability</b>	
<b>Provide the calculated % of agreement for a given level of the pest (see PM 7/98)</b>	Not tested
<b>Test performance study</b>	
<b>Test performance study?</b>	no
