## EUROPEAN AND MEDITERRANEAN PLANT PROTECTION ORGANIZATION ORGANISATION EUROPEENNE ET MEDITERRANEENNE POUR LA PROTECTION DES PLANTES Summary sheet of validation data for a diagnostic test

The EPPO Standard PM 7/98 Specific requirements for laboratories preparing accreditation for a plant pest diagnostic activity describes how validation should be conducted. It also includes definitions of performance criteria.

Virology and GMO Unit   7 rue Jean Dixméras, 49044 Angers, France   Identification of Grapevine flavescence dorée phytoplasma - Nested-PCR 16SrV map adapted from Arnaud et al. (2007) followed by sequence analysis		
phytoplasma - Nested-PCR 165rV map adapted from Arnaud et al. (2007) followed by sequence analysis  Date, reference of the validation report  2023-11-13 - RV FDmapVF 6 V01 - Novembre 2023  - Loiseau (2023). Interlaboratory test Validation of methods for the identification of Flavescence dorée phytoplasma sensu stricto Report - 21D - version N°01 Identification of Grapevine flavescence dorée phytoplasma - Nested-PCR 165rV map adapted from Rossi et al. (2019) and Malembic-Maher et al. (2020) followed by sequence analysis  Validation process according to EPPO Standard PM7/98?  Is the lab accredited for this test?  Was the validated data generated in the framework of a project?  If yes, please specify  FLADOVIGILANT  Description of the test  Organism(s)  Grapevine flavescence dorée phytoplasma (PHYP64)  Detection / identification  Method(s)  Molecular Conventional PCR  Reference of the test description  As or adapted from an EPPO diagnostic protocol?  As or adapted from an IPPC diagnostic protocol?	Laboratory contact details	Virology and GMO Unit
Link to other validation data  - Loiseau (2023). Interlaboratory test Validation of methods for the identification of Flavescence dorée phytoplasma sensu stricto Report - 22FD - version N°01 Identification of Grapevine flavescence dorée phytoplasma - Nested-PCR 165rV map adapted from Rossi et al. (2019) and Malembic-Maher et al. (2020) followed by sequence analysis  Validation process according to EPPO yes Standard PM7/98?  Is the lab accredited for this test?  No Was the validated data generated in the framework of a project?  If yes, please specify  FLADOVIGILANT  Description of the test  Organism(s)  Grapevine flavescence dorée phytoplasma (PHYP64)  Detection / identification  Method(s)  Molecular Conventional PCR  Reference of the test description  As or adapted from an EPPO diagnostic protocol?  As or adapted from an IPPC diagnostic protocol?	Short description of the test	phytoplasma - Nested-PCR 16SrV map adapted from Arnaud et al. (2007) followed by sequence
methods for the identification of Flavescence dorée phytoplasma sensu stricto Report - 22FD - version N°01 Identification of Grapevine flavescence dorée phytoplasma - Nested-PCR 165rV map adapted from Rossi et al. (2019) and Malembic-Maher et al. (2020) followed by sequence analysis  Validation process according to EPPO yes Standard PM7/98?  Is the lab accredited for this test?  No Was the validated data generated in the framework of a project? Date, reference of the validation report	2023-11-13 - RV FDmapVF 6 V01 - Novembre 2023
Standard PM7/98?  Is the lab accredited for this test?  Was the validated data generated in the framework of a project?  If yes, please specify  FLADOVIGILANT  Description of the test  Organism(s)  Grapevine flavescence dorée phytoplasma (PHYP64)  Detection / identification  Method(s)  Molecular Conventional PCR  Reference of the test description  As or adapted from an EPPO diagnostic protocol  New test being considered for inclusion in the next version of the EPPO diagnostic protocol  As or adapted from an IPPC diagnostic protocol?	Link to other validation data	methods for the identification of Flavescence dorée phytoplasma sensu stricto Report - 22FD - version N°01 Identification of Grapevine flavescence dorée phytoplasma - Nested-PCR 16SrV map adapted from Rossi et al. (2019) and Malembic-Maher et al.
Was the validated data generated in the framework of a project?  If yes, please specify  Description of the test  Organism(s)  Detection / identification  Method(s)  Method: Molecular Conventional PCR  Reference of the test description  As or adapted from an EPPO diagnostic protocol  New test being considered for inclusion in the next version of the EPPO diagnostic protocol  As or adapted from an IPPC diagnostic protocol?  As or adapted from an IPPC diagnostic protocol  As or adapted from an IPPC diagnostic protocol?  As or adapted from an IPPC diagnostic protocol?  As or adapted from an IPPC diagnostic protocol?	Validation process according to EPPO Standard PM7/98?	yes
framework of a project?  If yes, please specify  Description of the test  Organism(s)  Grapevine flavescence dorée phytoplasma (PHYP64)  Detection / identification  Method(s)  Method: Molecular Conventional PCR  Reference of the test description  As or adapted from an EPPO diagnostic protocol  New test being considered for inclusion in the next version of the EPPO diagnostic protocol  As or adapted from an IPPC diagnostic protocol?  As or adapted from an IPPC diagnostic protocol  no	Is the lab accredited for this test?	no
Description of the test  Organism(s)  Grapevine flavescence dorée phytoplasma (PHYP64)  Detection / identification  Method(s)  Method: Molecular Conventional PCR  Reference of the test description  As or adapted from an EPPO diagnostic protocol  New test being considered for inclusion in the next version of the EPPO diagnostic protocol?  As or adapted from an IPPC diagnostic protocol?  As or adapted from an IPPC diagnostic protocol	Was the validated data generated in the framework of a project?	Euphresco
Organism(s)  Grapevine flavescence dorée phytoplasma (PHYP64)  Detection / identification  Method(s)  Molecular Conventional PCR  Method: Molecular Conventional PCR  Reference of the test description  As or adapted from an EPPO diagnostic protocol  New test being considered for inclusion in the next version of the EPPO diagnostic protocol?  As or adapted from an IPPC diagnostic protocol?  As or adapted from an IPPC diagnostic protocol	If yes, please specify	FLADOVIGILANT
Organism(s)  Grapevine flavescence dorée phytoplasma (PHYP64)  Detection / identification  Method(s)  Molecular Conventional PCR  Method: Molecular Conventional PCR  Reference of the test description  As or adapted from an EPPO diagnostic protocol  New test being considered for inclusion in the next version of the EPPO diagnostic protocol?  As or adapted from an IPPC diagnostic protocol?  As or adapted from an IPPC diagnostic protocol		
Detection / identification identification  Method(s) Molecular Conventional PCR  Method: Molecular Conventional PCR  Reference of the test description  As or adapted from an EPPO diagnostic protocol  New test being considered for inclusion in the next version of the EPPO diagnostic protocol?  As or adapted from an IPPC diagnostic protocol?  As or adapted from an IPPC diagnostic protocol	Description of the test	
Detection / identification identification  Method(s) Molecular Conventional PCR  Method: Molecular Conventional PCR  Reference of the test description  As or adapted from an EPPO diagnostic protocol  New test being considered for inclusion in the next version of the EPPO diagnostic protocol?  As or adapted from an IPPC diagnostic protocol?  As or adapted from an IPPC diagnostic protocol		
Method(s)  Method: Molecular Conventional PCR  Reference of the test description  As or adapted from an EPPO diagnostic protocol  New test being considered for inclusion in the next version of the EPPO diagnostic protocol?  As or adapted from an IPPC diagnostic protocol?  no	Organism(s)	
Method: Molecular Conventional PCR  Reference of the test description  As or adapted from an EPPO diagnostic protocol  New test being considered for inclusion in the next version of the EPPO diagnostic protocol?  As or adapted from an IPPC diagnostic protocol?	Detection / identification	identification
Reference of the test description  As or adapted from an EPPO diagnostic protocol  New test being considered for inclusion in the next version of the EPPO diagnostic protocol?  As or adapted from an IPPC diagnostic protocol	Method(s)	Molecular Conventional PCR
As or adapted from an EPPO diagnostic protocol  New test being considered for inclusion in the next version of the EPPO diagnostic protocol?  As or adapted from an IPPC diagnostic protocol	Method: Molecular Conventional PCR	
New test being considered for inclusion in the next version of the EPPO diagnostic protocol?  As or adapted from an IPPC diagnostic protocol	Reference of the test description	
next version of the EPPO diagnostic protocol?  As or adapted from an IPPC diagnostic protocol	As or adapted from an EPPO diagnostic protocol	no
protocol	I =	1.
Reference of the test Arnaud et al. (2007)	As or adapted from an IPPC diagnostic	no
	protocor	

Is the test modified compared to the reference test	yes The sequence of the forward primer of the second PCR, FD9-F6, different because one SNP (T/C) has been evidenced for some genotypes. PCR conditions adapted for routine analysis.
Kit	
Is a kit used	no
Other information	
Reaction type	Nested
Performance Criteria :	
Organism 1.:	Grapevine flavescence dorée phytoplasma(PHYP64)
Analytical sensitivity	
What is smallest amount of target that can be detected reliably?	Last level at 100% positive results: 1x10^-1 Last level with positive result(s): 2x10^-3
Diagnostic sensitivity	
Proportion of infected/infested samples tested positive compared to results from the standard test, see appendix 2 of PM 7/98	87.1%
Standard test(s)	triplex real-time PCR adapted from Pelletier et al. (2009)
Analytical specificity - inclusivity	
Number of strains/populations of target organisms tested	15 samples positive for FD (VmpA-II and VmpA-III, M54 from different European countries, M38, M50, M51 and a variant, M122, M12, M36)
Specificity value	100%
Analytical specificity - exclusivity	
Number of non-target organisms tested	15 non target samples including Palatinate Grapevine Yellows (M53 and M46), 'Candidatus Phytoplasma rubi', 'Ca. P. solani', Alder Yellows phytoplasma, North American Grapevine Yellows, 'Ca. P; australiense', 'Ca. P. australasia', 'Ca. P. asteris'-related strain and healthy grapevine.
Specificity value	100%
Diagnostic Specificity	
Proportion of uninfected/uninfested samples (true negatives) testing negative compared to results from a standard test	82.2%
Specify the test(s)	triplex real-time PCR adapted from Pelletier et al. (2009)
Reproducibility	
Provide the calculated % of agreement for a given level of the pest (see PM 7/98)	93%
Repeatability	
Provide the calculated % of agreement for a	Between 86 and 100%

given level of the pest (see PM 7/98)		
Test performance study		
Test performance study?	yes	
Brief details of the test performance study and its output.It available, link to published article/report	The samples subject to the Grafdepi TPS were DNA samples: 30 samples infected by grapevine flavescence dorée phytoplasma, 4 healthy grapevines and 26 samples infected by other phytoplasmas. Diagnostic sensitivity: 87.1% Twenty-two false negative results (FN) were generated with this method. Those FN are not reproducible i.e. they do not correspond to the same samples between participants. Thus, it is not a problem of inclusivity of the method but more a problem of reproducibility. Diagnostic specificity: 82.7% Eleven false positive results (FP) have been obtained after PCR and 19 after sequencing. However, those FP are not reproducible. Thus, it is not a problem of exclusivity of the method but it is more probably linked to problems of microcontaminations inherent in nested-PCR methods and/or problems in interpretation of the sequences. Three per cent of the participants' responses were inconclusive.
